

CHECKLIST: LOW-FLOW DEVICES

One of the easiest and least expensive ways to increase water efficiency in apartments is to install low-flow showerheads and faucet aerators!

- 1: Conduct the water flow rate bag test** to see if you have an inefficient shower/sink fixture. Instructions are on the bag.
- 2: Circle “Within Range” or “Over Limit”**. If “Within Range” you are done! If “Over Limit”, just install the appropriate low flow device(s) and write the date you installed it.

	Shower # 1	Shower # 2
Flow Rate Bag Test	Within Range Over Limit	Within Range Over Limit
Install Low Flow Device	Date Completed _____	Date Completed _____

	Sink # 1	Sink # 2
Flow Rate Bag Test	Within Range Over Limit	Within Range Over Limit
Install Low Flow Device	Date Completed _____	Date Completed _____
